

# **CURRENT HOUSING UNIT DAMAGE ESTIMATES**

## **HURRICANES KATRINA, RITA, AND WILMA**

**February 12, 2006**

**Data from FEMA Individual Assistance Registrants and Small Business Administration  
Disaster Loan Applications. Analysis by the U.S. Department of Housing and Urban  
Development's Office of Policy Development and Research.**

## **Introduction**

The Office of the Federal Coordinator for Gulf Coast Rebuilding at the Department of Homeland Security, in cooperation with the Federal Emergency Management Agency, the Small Business Administration, and the Department of Housing and Urban Development have compiled data to assess the full extent of housing damage due to Hurricanes Katrina, Rita, and Wilma. Detailed tables on the extent of damage, type of damage, tenure, insurance status, and housing type are provided for Alabama, Florida, Louisiana, Mississippi, Texas combined and individually.

Detailed tables are also provided for select parishes in Louisiana (Calcasieu, Cameron, Jefferson, Orleans, Plaquemines, St. Bernard, St. Tammany, and Vermilion), counties in Mississippi (Hancock, Harrison, and Jackson), and each of Orleans Parish's 14 Planning Districts.

Summary damage estimates are provided for the 136 counties across the five states that had 10 or more housing units with damage.

Users of these data are advised to review the methodology section. We hope that these data are helpful as states and local communities plan and implement their long-term recovery strategies.

**Methodology for Assessing Housing Unit Damage due to Katrina, Rita, and Wilma:**  
February 12, 2006

The estimates of housing unit damage in these tables are largely based on direct inspection of housing units by FEMA to determine eligibility for FEMA housing assistance. These inspections were conducted between the time of each of the three Hurricanes and February 12, 2006. Only occupants of housing units are eligible for FEMA housing assistance. As such, these data do not reflect other types of damaged housing units, such as pre-disaster vacant units and summer or second homes.

Because it is possible for multiple individuals to register for FEMA housing assistance for the same housing unit, these data reflect a complicated set of procedures to identify individual housing units. For example, if a husband and wife both registered, or if an owner and their boarder both registered for the housing unit, we only counted the housing unit once.

Definitions

**Level of Damage**

For most properties, FEMA contract inspectors make a direct assessment of housing unit damage. For some of the units impacted by Hurricane Katrina, FEMA did not do direct inspections, but made some assumed level of damage based on the flood depth of a housing unit in some portions of Orleans, St. Bernard, and Jefferson Parishes and to a much lesser extent in some of the flood inundated areas of Mississippi.

FEMA inspects properties to determine eligibility for real property and personal property assistance. FEMA real property assistance is determined as the cost to make repairs to make the home habitable. If a home is less than 50 percent damaged, FEMA will provide up to \$5,200 in repair assistance for damage not covered by insurance. If damage is greater than 50 percent FEMA will provide \$10,500 in repair assistance for damage not covered by insurance. FEMA will make similar assessments for personal property damage.

Because FEMA only provides reimbursement at three levels, less than \$5,200, \$5,200, and \$10,500, this analysis categorizes the inspection results into three categories:

Minor Damage:

- Property inspection finds damage less than \$5,200; or
- If no real property inspection, personal property damage of less than \$5,195.76; or
- If no direct inspection, remote sensing finds water depth of 6 inches to 1 foot (for portions of Orleans, St. Bernard, and Jefferson Parish); or

Major Damage:

- Property inspection finds damage greater than or equal to \$5,200 and less than \$30,000; or
- If real property inspection used the inspection default of \$5,200; or
- If no real property inspection, personal property damage of greater than or equal to \$5,195.76 but less than \$30,000; or
- If no real property inspection and personal property used the inspection default of \$5,195.76; or
- If no direct inspection, remote sensing finds water depth of 1 foot to 2 feet (for portions of Orleans, St. Bernard, and Jefferson Parish); or

#### Severe Damage:

- Property inspection finds damage greater than or equal to \$30,000; or
- If real property inspection used the inspection default of \$10,500; or
- If no real property inspection, personal property damage of greater than or equal to \$30,000; or
- If no real property inspection and personal property used the inspection default of \$10,391.51; or
- If no direct inspection, remote sensing finds water depth of 2 feet or greater (for portions of Orleans, St. Bernard, and Jefferson Parish); or

#### **Small Business Administration (SBA) Median Verified Loss**

A subset of FEMA registrants with real property damage applied to the Small Business Administration for a loan to assist with repairing their property. If the applicant meets some income and credit thresholds, SBA will have a contract inspector make a detailed assessment of the real property loss due to the disaster (referred to as “verified loss”). This assessment is generally more precise than the FEMA inspections.

In the tables, SBA Median Verified Loss refers to the median “verified loss” estimate by the SBA inspectors for units assessed by the FEMA inspector to have either “major damage” or “severe damage”. This SBA inspection helps provide context as to what “major” and “severe” damage mean in the local context. That is, “severe damage” due to wind may be different than “severe damage” due to a storm surge. The SBA data extract was from early January 2006.

#### **Tenure**

Owner-Occupied Housing Units & Renter-Occupied Housing Units. When individuals registered for FEMA assistance, they were asked if they were a renter or an owner. In approximately 10 percent of cases, there was no tenure indicated. These tables assume those individuals not indicating tenure were owner-occupants.

#### **Type of Damage**

These tables break out damage into two categories, homes with any flood damage, and homes with no flood damage. If a home had flood damage as well as other types of damage, it is categorized as having flood damage. Most homes without flood damage had damage related to wind. Flood damage was determined if FEMA inspectors indicated damage was due to flooding or if the damage estimate was from remote sensing (which based damage on flood depth).

#### **Flood Plain Status**

Each housing unit was geocoded to determine if it was in or outside of a FEMA 100-year flood zone, as determined using Q3 flood maps with flood zone designations of “A” or “V”.

#### **Insurance Status**

Insurance status was determined by FEMA data if the registrant indicated having hazard or flood insurance. For a very few cases, there was no information on insurance status and “no insurance” was assumed.

#### **Structure Type**

Structure type is determined using United State Postal Service Delivery Point Bar Code (DBPC). If DPBC equals the last two numbers of the address, then the unit was categorized as single-family (one-unit). Generally, units in row houses were considered single-family. If the unit was not single-family, then it was assumed to be in a multifamily structure (more than one unit at an

address). The size of the multifamily structure was determined by adding all registrant housing units from the same address. In some cases, trailer parks were also determined to be “multifamily”.

### **Double Counting**

There is risk for double counting in these data. A number of procedures were implemented to reduce this double counting but some double counting may remain. Those procedures were as follows:

- Only include records with a FEMA inspection. If remote sensing inspection, only include cases where a grant was provided or the FEMA data indicate that the owner or renter had flood insurance.
- If there were duplicate registrant numbers, then the record with highest FEMA damage rating is retained
- If there were duplicate records for a single-family property, then the record with highest FEMA damage rating was retained. If one registrant was owner and other was renter, the owner was retained. Single-family records were considered to be duplicate for the same property if USPS zip9 plus DPBC were the same.
- If there were duplicate records for a multifamily unit, then the record with the highest damage rating was retained. Multifamily records were considered to be duplicate if the last name and address were the same.

### **Undercounting**

There is also a risk for undercounting. These data do not count vacant homes or second homes. They also will not include properties that have not yet had a FEMA inspection, although FEMA reports that most inspections were completed at the time of the February 12, 2006 extract used for this analysis. Finally, if an individual did not register with FEMA, their damage would not be counted.
